

*****RECALL ON DIVEALERT AND DIVEALERT PLUS***** (5th June 2013)

The signaling device is attached to the diver's buoyancy compensator device (BCD) power

inflator/alternate regulator system by a chrome-plated brass coupling and is used to activate a loud surface horn or an underwater percussion noise to alert others in the event of a diver's emergency. The devices are also used in non-emergencies to get the attention of the pickup boat or other divers. The DA2 is black with an orange button, the DP2 is black with a gray knob and red button and has DiveAlert PLUS printed on it, and the DV2 is black and red. They can be used with Aqualung AirSource, Oceanic Air XS, Aeris Air Link and Mares Air Control regulator/inflators.

Only these signaling devices without any stamped writing on the coupling's collar are included in this recall.

Dive equipment stores nationwide from July 2009 through May 2013
